

MRS Remeex[®] male system

Keep continence under control

- An effective first-line surgical intervention for mild to moderate male incontinence.
- **Allows Surgeon to provide accurate sling tension whilst preserving proper voiding function.**
- Adjustment ensures that Surgeon is no longer limited to just one opportunity to create proper support, especially useful in male patients who require urethral compression over time.
- **Flexibility to increase or decrease urethral support with the patient awake, standing & actively participating in achieving or maintaining continence.**

MRS Remeex[®] male system

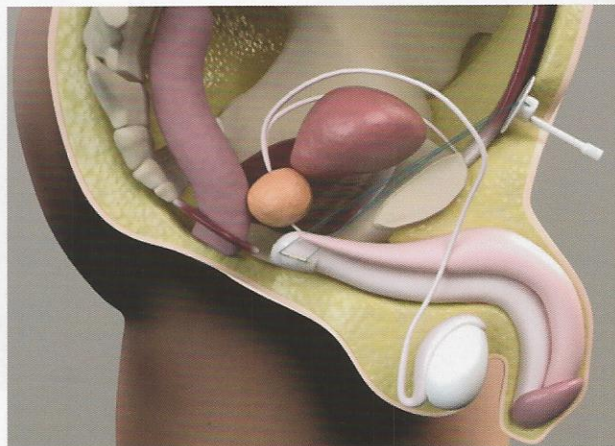

"Crude slings to compress the urethra and restrict urine flow have been around for decades, but they often fail as a result of aging, requiring further surgery. The big advantage of the Male Re-adjustable System, invented around six years ago is that it can be adjusted as a man's body changes, without an operation."

by Dr Greg Boustead, MD, Consultant Urologist, Lister Hospital, Stevenage, UK.

Flexibility to readjust....

- MRS Remeex allows for readjustment of urethral support whenever needed with a very simple procedure.
- Adjust the sling months or even years post-op to treat recurrence of symptoms.
