Pelvic Floor Retraining

Software

- Touchscreen, battery operated unit
- Fast-sampled EMG in Raw and RMS formats
- User definable stimulation settings includes an intuitive display for quick and precise control.
- Sensory EMG-triggered Stimulation combines active and passive muscle rehabilitation to help patients strengthen muscles through biofeedback.

Disposables

- Same electrodes for all modalities gives more consistent monitoring and stimulation, and reduced clinical setup time.

Audio-Visuals

- Animations and audio feedback provide relevant rehabilitation goals and activities to keep clients motivated
- Single and dual channel linegraphs, bargraphs and digital displays.
- Above and below threshold sound feedback options

Software

- Advanced and complete database.
- Record, replay and review sessions.
- Statistics, trend reports and single session reports
- Provides useful documentation to demonstrate compliance for third party compensation.

Customization

- Scripts with work-rest or continuous exercise protocols contain templates with varying degrees of difficulty.
- Allows you to build training programs suited to your client's individual needs.
- Easily editable reports provide valuable information for third party payers and patient files.

Home-Care

- A patient lock feature reduces device complexity and ensures patient compliance when used as a take home unit to enhance clinical training.
- Saved data can be uploaded to PC when device returns to clinic.
